DREAM11

Fantasy Sports Case Study

Product Management CaseStudy

Objectives & Goals

- Understand Fantasy sports industry in general
- Identify various problems that are prominent in this industry today
- Propose ways in which the buring problems could be solved
- To get job opportunities from this case study in fantasy sports domain-

Motivation

→ First of all, we are die hard cricket and fantasy sports fans, so we wanted to explore this domain

→ In the recent editions of the Indian Premier League (IPL), we saw a notable increase in promotions by sports betting companies

→ This surge in sports betting interest during the IPL intrigued us, prompting us to dive deeper into this domain and do a case study on it.

Our Process

Define | Brainstorm | Problem Identification | Improve

PHASE 1: DEFINE

In this phase, Our main goal was to identify a pressing problem that requires immediate attention and whose resolution would yield a substantial positive outcome for the company.

→ After extensive research, we identified the following **key challenges** in the fantasy sports industry that require immediate attention

Crowded Sports Fantasy Arena

Competitive space with 50+ apps & less scope of differentiation

Market Penetration Challenges

More than 70% of market is untapped, but no company has yet figured out how to penetrate there

Social Stigma

Fantasy sports participants are viewed as obsessive, disconnected from reality

Fairness

Fairness is perceived to be lacking and game outcomes seem influenced by uncontrollable factors

Note: If you are interested in understanding the process that led to this conclusion, please refer to this research document where we have outlined our methodology in detail.

→ Upon recognizing the significant issues at hand, our focus shifted towards identifying the root cause behind them. After brainstorming, we successfully uncovered the core problem.

Following was the Root cause: **Trust**

Note: If you are interested in understanding why we think Trust was the root cause of the problem, please refer to this document.

→ After doing all the above things, we came up with following problem statement

Problem Statement

How can we enhance user trust in Dream11's cricket contests to drive user acquisition, retention, revenue growth, and alleviate social stigma?

Points to note:

- We choose Dream11 as they currently hold approximately 90% market share
- They face the greatest risk of losing customers
- We prefer Dream11 over other apps and want to help them stay on top.
- We choose to focus only on cricket betting because it contributes to 85% of revenue.

PHASE 2: Brainstorm

In this phase, Our main goal was to identify factors that contribute to an increase in trust among users

→ Following are all the factors that we identified contributed to trust in fantasy apps

PHASE 3: Problem Identification

Our aim was to evaluate Dream11's strengths and weaknesses on identified factors, highlighting areas of excellence and areas in need of improvement, to foster greater trust and satisfaction among the app's user base.

→ In order to know these, we conducted thorough research

6	100+	2	30+
User Interviews	Review Analysis on Playstore	Usability tests	Analysis of articles & videos

Note: If you are interested in look at our in depth research, go through this folder

→ The research findings emphasize **specific areas** where Dream11 can make improvements to address pain points, ultimately leading to enhanced trust among users.

Emotional Disconnect: Culprits – Ads, SM, and Social Proof

Prioritised this

Invisible Strings: Lack of Transparency

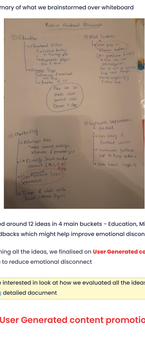
Bridging the English Gap in Non-Metro Markets

Note: If you are interested in look at how we reached to this conclusion, go through this

PHASE 4: Improve

Once we knew exactly what we wanted to work upon, then we ideated ways by which we can reduce Emotional disconnect

→ Here is the summary of what we brainstormed over whiteboard



We brainstormed around 12 ideas in 4 main buckets - Education, Mini Contest, Marketing and Continuous feedbacks which might help improve emotional disconnect.

→ After brainstorming all the ideas, we finalised on **User Generated content promotion** idea to reduce emotional disconnect

Note: If you are interested in look at how we evaluated all the ideas to come to this conclusion, go through this detailed document

Final solution: User Generated content promotion

→ **User Flow**

→ **Impact of the proposed idea**

- Cost-effective marketing strategy leveraging user-generated content instead of creating content from scratch
- Creation of a community of active and motivated users
- Greater brand exposure through the sharing of testimonials on their social media platforms
- Enhanced credibility and trust through user-generated testimonials
- Positive word-of-mouth promotion as users share their testimonials with their own networks
- Potential increase in new user acquisition as a result of the promotional activities
- Improved brand loyalty and customer satisfaction through rewarding participants with prizes
- Valuable feedback and insights from user-generated testimonials for future improvements
- Increased user engagement and participation in contests

→ **Key wireframes**

Email in which the user is given a link to provide a testimonial.

testimonial screen which user is directed to

Screen which comes ones user submits testimonial

Email which user gets once testimonial is accepted

THANK YOU!!
